CONNECTOR**

TRANSCEND TRADITIONAL SCANNING

LEAVE TRADITIONAL SCAN TO E-MAIL BEHIND.

KYOCERA EXCHANGE CONNECTOR ALLOWS USERS TO SCAN HARDCOPY DOCUMENTS AND SEND THEM AS USER-IDENTIFIED E-MAIL ATTACHMENTS TO MULTIPLE RECIPIENTS DIRECTLY FROM THE MFP.

Imagine being able to walk up to your MFP with a hardcopy document, and with the touch of a button transform it into a digitized version that can be e-mailed as an attachment to any number of recipients under your own e-mail address. KYOCERA now brings this capability to users with Exchange Connector, a highly productive application that takes scan to e-mail to a new level.

KYOCERA Exchange Connector is designed to work with Microsoft Exchange™ Server, enabling your MFP to function as an extension of your e-mail environment. Authenticated users can harness the key features available with Microsoft Outlook®, including access to contacts and global address lists, as well as the ability to set up various e-mail fields to make addressing easy. Subject line and body message can be entered directly from the MFP to further streamline the process. And for companies requiring confirmation or audit trails, a copy of each message is placed in the logged in user's Sent Items folder.

In today's security conscious environment, sending scanned messages from an unknown MFP address runs the risk of your message not getting through. Yet that is exactly what happens in a traditional scan to e-mail environment. With KYOCERA Exchange Connector, e-mails created at the MFP are addressed from you, giving recipients confidence of knowing they are receiving messages from a safe and reliable source.

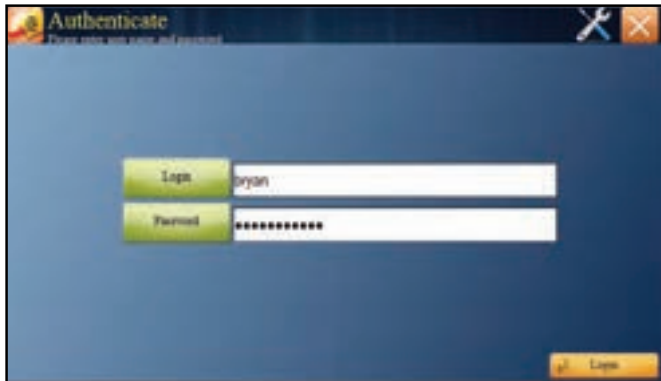

For businesses that depend on e-mails and document attachments as part of their everyday workflow, KYOCERA Exchange Connector offers a highly productive way to easily transform hardcopy documents into secure Microsoft Exchange electronic message attachments.

- › Scan and digitize hardcopy documents directly from any HyPAS-enabled KYOCERA MFP
- › Seamless integration with Microsoft Exchange Server and Microsoft Outlook
- › Send secure attachments directly from the user's own e-mail address

KYOCERA EXCHANGE CONNECTOR

HyPAS®

KYOCERA's HyPAS (Hybrid Platform for Advanced Solutions) is a powerful and scalable software solution platform. Through direct enhancement of the MFP's core capabilities, to the integration with widely accepted software applications, HyPAS will enhance your specific document imaging needs, resulting in improved information sharing, resource optimization and document workflows.

To login, users simply enter their Outlook username and password.

Subject line and message body can be entered directly from the MFP.

KYOCERA EXCHANGE CONNECTOR BENEFITS

- › Increase productivity by creating and transmitting scans as e-mail attachments directly from the MFP
- › Scanned documents can be e-mailed from an identified source
